

PAVERS
COPINGS

PAVERS

Natural stone pavers are durable, versatile building materials valued for their strength, longevity, and natural character. Sourced from quarries around the world, our collections are selected to perform across varied climates while offering refined aesthetic flexibility. Natural variation in color, texture, & finish allows each installation to feel intentional while remaining grounded in authentic stone.

Design direction plays a key role in selection. Smooth finishes and clean lines support contemporary outdoor environments, while tumbled surfaces and visible texture introduce a more relaxed, timeworn aesthetic. Climate considerations should guide material choice, particularly in regions exposed to heavy precipitation or temperature extremes. The most successful applications are those where the paver reinforces the surrounding architecture rather than competing with it.

COPINGS & WALL CAPS

Copings and wall caps define and protect the upper edge of walls, pools, and raised surfaces. They manage water runoff, shield underlying structures from exposure, and provide a clean, finished termination to masonry and hardscape installations.

Designed to integrate with all paver formats, our copings maintain visual continuity across the project while clearly resolving edges, elevations, and transitions. Used as both functional and architectural elements, copings, and wall caps complete the installation with clarity, balance, and a refined natural stone finish.
